The DHTRQUAD offers the same great features as the DHT system, except there are 4 receivers in a single rack space chassis. Each of the independent receivers feature Auto Scan, IR Sync, and 120 selectable channels. The DHTRQUAD has a built in antenna combiner and power distributor. The DHTRQUAD has 4 independent XLR outputs (one for each receiver) as well as a mixed output, allowing the user to sub mix the receivers on the DHTRQUAD and come out of one XLR or ¼” output. The DHTRQUAD can be used with any 64 or 76 Series Handheld or Body Pack transmitters, in addition to our wireless shock mount base, the SM-W76.

Both the 64 Series and 76 Series transmitters will sync with the DHTRQUAD. They feature an LCD display with a battery life indicator. The 76 Series transmitters also features a lockable mute button and have the ability to manually select the channel in addition to the sync function. All transmitters are powered by 2AA batteries. The HH64 handheld transmitter is available with either a Dynamic Cardioid (HH64) or Condenser Super Cardioid (HH64SC) element. Both body pack transmitters have a 0/-10/Mic selector switch.
