

WATERPROOF FITNESS

WIRELESS HEADSET MICROPHONE

H2O7

Flimsy headset mics can become damaged or break during fitness routines. Often times, too much perspiration and moisture can also cause problems. Designed specifically for the demanding environment of the fitness industry – the H2O7 features a durable, lightweight, comfortable headset design that stays in place even during the most rigorous fitness routines. Its “work horse” reputation make the H2O the preferred choice for fitness facilities, providing years of dependable service even under the most rigorous use. The noise canceling element provides articulate sound reproduction while minimizing annoying feedback. The H2O7 is the only IP67 rated waterproof headworn microphone with an exclusive detachable cable feature – the IP67 specification means that the H2O7 is waterproof tested at a depth of 1 meter for a minimum of 30 minutes, also making the headset completely unaffected by sweat.

Don't let a worn headset mic cable be your downfall during a fitness class routine. Sometimes a headset mic is still perfectly fine, but a worn mic cable prevents it from working.

The replaceable cable feature prevents any downtime due to cable damage, while saving time and money. Simply replace the detachable cable and be ready for your next class in minutes rather than experiencing costly “down time” by having to send the entire mic in for repair. The versatile H2O7 can be wired to work with most major wireless brands. The exclusive feature set of the H2O7 from Special Projects Audio make it an industry standard for fitness instructors, worldwide.

- Rugged, lightweight headset design stays in place during rigorous fitness routines.
- Waterproof / sweatproof construction - IP-67 moisture and dust rated
- Noise canceling element helps reduce feedback
